Automation Three levels of automation exist, as follows. Manual automation, also known as 'Record Action', refers to CAD creation. This can be done from within the application or via a macro recorder. Interactive automation, also known as 'Record Custom Action', refers to customizing a drawing. This can be done from the application menu or from a macro recorder. Exclusive automation, also known as 'Record Subaction', refers to a custom drawing created without the use of the application and can be done from the application menu or from a macro recorder. AutoCAD allows the user to automate frequently performed tasks. These tasks include creating multiple drawings in a given project (multiple drawings), inserting a reference to a drawing (many objects), creating custom shapes and symbols, and many others. I have a website with hundreds of pages, all containing a particular pattern. I'd like to go through each page and find and replace each occurrence of that pattern in the source code. What's the best tool for doing this? I'm currently using Notepad++, but I'm open to suggestions of other good tools. A: If you have access to the Apache web server and are willing to run a script, use the mod\_rewrite functionality of the Apache web server. A: You could get into the source code on your local machine, and run a "find and replace" against the whole thing. It would depend on your text editor, but a search-and-replace should work pretty well. About Jonny Rybka is a software developer from the Czech Republic who worked in a gaming company. And you can edit annotations on any drawing in the layout panel, without losing the original context. Smarter Creation: Create visually appealing 3D views that don't require that you use costly rendering tools. (video: 1:18 min.) New 3D View: You can now create 3D views with more useful views, like front, top, and side views, right from the View Manager. You also have more flexibility in setting up the view. (video: 1:15 min.) Enhancements to Enhanced 3D: You can now set up the view to show a section of the 3D object, like the center of the sphere, along with useful view information such as scale and direction. New Drawing Settings: You can now have the drawing updates automatically display the revised drawing in the annotation panel. And you can see that an object is a linked drawing, allowing you to modify the linked file when you're working in the linked drawing. Align and Distribute: You can now perform three operations on a single selected point or point set, including align and distribute points, which gives you an array of points based on a specific distance between the points. (video: 1:12 min.) New Text and Vector Styles: You can now create, modify, and apply Style settings and AutoText styles directly in the drawing window. You can easily apply a style that you already created to your drawing. (video: 1:28 min.) Geometry Functions: Geometry functions provide you with the power to quickly and easily perform advanced analysis of the geometry of your drawings, such as calculating properties, calculating three-dimensional angles, calculating area, and calculating surface area. (video: 1:06 min.) Enhancements to Live View, Live Blocks, and Live Paint: You can now select the entire Live Blocks or Live Paint object and edit it without losing context of the original object.
