College Basketball Invades the Arena! It's March, and that means it's NCAA Tournament time! As college hoops season winds down, we're taking a look at the 2012-13 squads who'll be trying to make history. With the number of teams in this year's tournament topping the all-time record (34), we thought we'd get the ball rolling with this list of the three things (in addition to a good old-fashioned East Coast bias) that will make history. Contrary to their current postseason woes, Texas A&M was one of the six teams to make the NCAA Tournament just a few years back. In fact, the Aggies joined the party late in the year, despite finishing the regular season in fifth place in the SEC. While there's a long list of teams that made their first trip into the tournament between 1995-2000, 1995 is a particularly interesting year for the history of tournament qualification, as 12 of the 34 teams that will be playing in this year's March Madness were new to the Big Dance. Finally, it's official: the field for the NCAA Tournament will be set at the conclusion of the regular season, beginning this week with conference tournaments. With 34 teams in this year's field, an average of 15.7 games will be necessary to determine a champion. While college basketball fans will get their first glimpse of the field in March, the Big Dance won't open its doors to the public until the first Saturday of April. Only the Associated Press and USA Today have the inside scoop for now, and they'll be hard pressed to match this year's eligibility binge. We'll be pitting the East against the West in a battle of the unbeatens, and the "one and done" squads against the "winner takes all" schools. After the jump, check out our list of three things that will make history. Number of Teams Entering the Tournament: 34 Last Year's Tournament Winner: Connecticut (UConn, for the uninitiated,

Foxit Portable PDF Editor crack fixes or install will. Foxit Pdf Editor Patch. Foxit Pdf Editor Portable. The Foxit PDF Editor is a. Foxit Portable PDF Editor is a powerful and flexible PDF editing tool.Q: Right way to do logging in database? I've got a resource which I'd like to be able to query in order to get some statistics. I'm using Log4net to write all exceptions to an SQL Server database, and I wonder whether this is the best way to do this. Would it be sensible to just write the results to the database, or are there better ways to do logging? (We're using C#, so any solutions using the.NET Framework are more than welcome). A: We do this with the help of Linq to SQL. LINQ to SQL gives you the tools to take an existing database and bind it to your forms or classes to be able to access the database without having to write code or include any assembly references or external libraries. That allows us to take a complex database schema and represent it in C# with a minimal amount of code. See this article: for more details on using Log4net with Linq. A: I try to run an application which can be used via a web interface. For example, the web interface can collect stats of completed requests. When an exception occurs, it will add a new record to the database. The web interface can then query this. To make this possible, I use a wrapper over SQL Server tables which provides functionalities like inserting records and querying the database. // // SOTry.swift // // // Created by Victor Asao on 2017-02-05. // Copyright © 2017 Victor Asao.
