Tortoise SVN is an essential part of my daily computer use. It really helps me understand how my code affect my documents and vice versa. With Tortoise SVN you can see all the code that has been updated. It's really easy to use. I can update my code easily from the command prompt. I'm sure there's other clients out there, but I have been using this one for a while now. I'm sure my code will be easier to find since it's so central to all the code that I'm doing. Tortoise SVN has a wide range of applications. You can push and pull code from multiple repositories. You can do more than just code because you can also grab information about databases, projects, and more. In the current computer environment, the best code manager is Tortoise SVN. Each time I'd sit down to go over the latest and greatest (or seemingly newest) software, I'd be faced with a 5-page questionnaire of every possible feature you could ever want, most of them covering things I don't typically use, plus a bunch of advertorials. Some of those pageviews help the vendor promote their product, and some will help you discover new awesome programs. The point is that I have to wonder what CNET is getting for all the time and energy spent on such editorial review, and it never as simple as marketing hype. Then I realized that the world has changed. That hot gossip could be enough to compel a typical user to check out your product on its own merits, not on the reputation of the reviewer's bosses. Now I just need to make sure that when I write a review, I don't make any stupid errors like forgetting the delete key or not having the latest version installed.
