DroidScript JavaScript Mobile Coding IDE V1.78 [Premium] [Latest]

Clients can tap,.. DroidScript Library v2.0 (Premium). Demo... androidvideoplayer.DroidScript Library - JavaScript Mobile .The present invention generally relates to storage systems and to a method of utilizing storage systems and, in particular, to a storage system utilizing self-replicated data blocks. To maximize a storage system's performance, it is desirable for the storage system to support re-replication of data blocks. However, conventional systems typically have a limitation of only being able to support the re-replication of data blocks within the same storage system. Accordingly, an improved storage system would be advantageous and in particular a system allowing the storage system to support self-replication of data blocks in a cost effective manner would be advantageous. According to the teachings of the present invention, a storage system is provided that includes a plurality of storage nodes and a storage controller that is coupled to each of the storage nodes. The storage nodes each include a memory module and a storage controller that is coupled to the memory module. The storage nodes are networked to each other via a network. The storage controller of each of the storage nodes is operable to process requests for data to be stored in the memory module, wherein each of the storage nodes has the capability to support re-replication of data blocks from one of the storage nodes to another of the storage nodes. According to another aspect of the present invention, a storage controller is provided that includes a memory module that is coupled to a plurality of storage nodes via an address bus. The storage controller is operable to process requests for data to be stored in the memory module. In one embodiment, the address bus is divided into a first address bus, a second address bus and a third address bus, wherein the memory module is operable to store data on the first address bus, the second address bus and the third address bus. In one embodiment, the address bus is operable to receive a write request, wherein the first address bus is operable to receive a write portion of

the write request, the second address bus is operable to receive a different write portion of the write request and the third address bus is operable to receive a read portion of the write request. In one embodiment, the address bus is operable to receive a request to store data on the memory module, wherein the first address bus is operable to receive the request to store data on the memory module, the second address bus is operable to 04aeff104c
